

Project Update

A publication of San Bernardino Associated Governments

San Bernardino Associated Governments (SANBAG) is a county-wide coalition of elected officials that coordinates regional issues and is responsible for transportation planning, financing and related programs.

The Route 30/210 project is a partnership between SANBAG and Caltrans.

Both agencies share responsibility for the funding, design and construction of the new freeway.

July, 2002

ROUTE 210 CONSTRUCTION TO HEAT UP THIS SUMMER

Like the last quarter of the championship basketball game, the last few months of a construction project are the most exciting and intense. As the new 210 Freeway gets closer to completion, SANBAG, Caltrans and the partnering cities are making a full-court press to complete all the remaining elements and open on schedule this fall. This summer, as the temperature rises, activities along the freeway also will intensify and heat up in preparation for the opening to motorists.

In Upland, the automated paving operation is ongoing and should be completed this month. Construction of the new Campus bridge is completed, while the realignment of Campus Avenue to the new bridge is being coordinated with The Colonies development. When the freeway opens, Mountain will serve as the city's only on- and off-ramp until Campus is realigned and opened as the second interchange. Work on soundwalls is also well underway, including three additional walls that SANBAG authorized last fall - one between Quince and Euclid, one immediately east of Mountain and one immediately east of Euclid.

Some localized excavation is still taking place along the freeway corridor for specific projects, such as the Alta Loma storm drain construction.

In Rancho Cucamonga, bridge work is nearing completion at Beryl and Amethyst in anticipation of the paving operation, which will continue in July and August. Storm drain construction is also occurring throughout the city, along with soundwall construction and some localized excavation.

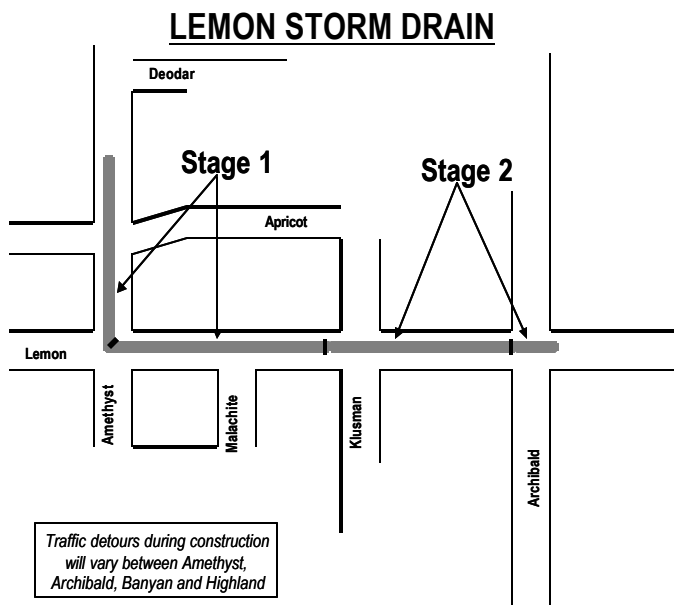

Following the paving operation, on- and off-ramps, signage, striping, guardrails and other safety measures will be installed as the finishing touches to the project. Landscaping of the freeway will be completed under a separate contract after the grand opening.

STORM DRAIN WORK HIGHLIGHTS THE SUMMER MONTHS

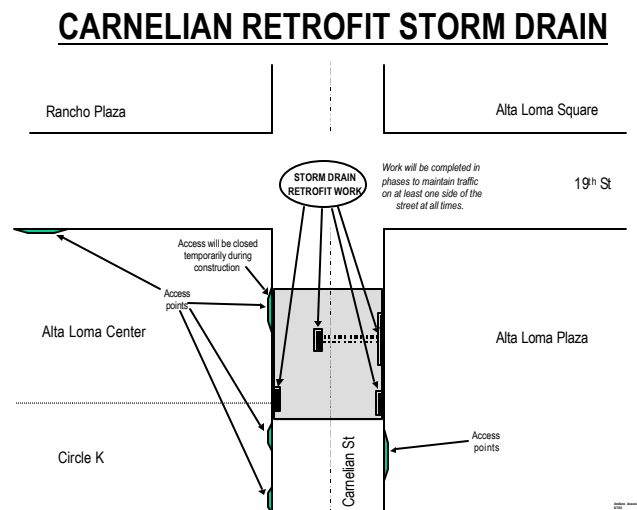

Like fingers extending from the freeway, storm drain projects are an integral part of the ongoing freeway construction into local communities. This summer, numerous storm drain projects will either continue or begin along the freeway corridor. Residents and businesses are encouraged to be aware of local street lane reductions, closures and detours. SANBAG is working closely with Caltrans and local cities to minimize the impacts of the storm drain construction. The following is a brief summary of the upcoming storm drain construction.

In Rancho Cucamonga, storm drain work is ongoing at Highland and the Alta Loma Channel (shown above) and will begin shortly along both Carnelian and Lemon. The Carnelian storm drain is a retrofit of previous storm drain construction which, after further analysis, requires larger structures to move the water back up onto local streets after passing under the freeway and joining with the Jasper storm drain system. The maps below illustrate the location of the storm drain construction planned.

Storm drain construction along Lemon will begin in July and is scheduled for completion in late September.

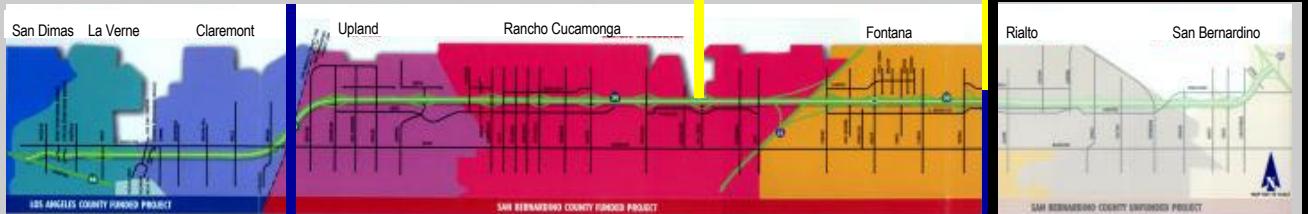

Carnelian retrofit storm drain construction will require lane reductions beginning north of 19th Street and extending south past the construction. One lane of traffic in each direction will be maintained at all times and moved to either side of Carnelian depending on the construction.

WHAT'S NEXT FOR ROUTE 210?

**Under Construction
Opening to Motorists Fall 2002**

CONSTRUCTION FACTS

Enough dirt has been excavated on the freeway to fill a football field one mile high! For the most part, the dirt was moved throughout the corridor to fill areas that needed to be elevated or needed to be filled, like the rock quarries near Benson in Upland. Some dirt also was moved to local developments near the construction, such as The Colonies development near Campus in Upland.

Temporary Road Closures

- Beryl between Highland and 19th
- Amethyst between Highland and 19th
- Campus between 19th and 20th
- Highland between Archibald and Hermosa
- Intersection of Lemon and Amethyst
(intermittently during the summer due to storm drain construction)
